Rainmeter offers plenty of ways to customize this effect. The most interesting and useful is the possibility to create two monitors using the GUI of Rainmeter. This option can be found in the configuration. The layout view allows you to choose your second screen on the left side of the GUI, while the front layout shows the visible applications. It can be selected in the view menu. You can also configure your first and second screen in the appropriate section of the configuration. We created this visual representation of the two monitors in the configuration window. It shows two panes, the first one lists the icons for the default screens, while the second shows the icons for the chosen screens. There are several ways to configure Visual Studio 2019. Features: The package is pretty lightweight, and contains the means to install it through Rainmeter, which is a mandatory requirement for functionality. Once integrated, it can be enabled as a skin, with only two variations to provide a light, or dark theme. Other Notes: Once on the desktop, it benefits from all default behavior, and aesthetic settings. Among others, this can mean ignoring mouse movement to be able to interact with colliding desktop elements, snap to edges, set transparency level, position, mouse hover action, or save position to show up in the same spot when launched later on. Installation: System Menu→ Rainmeter→ Add-Ons→ Rainmeter→ Install Installation (Wanted): Choose the skin to install. Rainmeter comes with many built-in skins, such as the default to simplify new installations, or to have it start out with the latest state of all the components. However, it is easy to make one's own. The number of skins on the Rainmeter website is actually quite a bit. There are skins for nearly every aspect of a screen, starting from the simplest ones, such as a text input field for a password, or whatever text appears on a window. This is where customization begins. As an example, you can set a skin for the clock, the weather, the battery indicator, or even the desktop background. Or, you can use Rainmeter to add something personal to the desktop, by setting up a skin to display date and time, as well as various other information. You can even have Rainmeter display anything that you like on the desktop, and keep it there until you delete it or restore the default configuration. Date and Time The date and time displays, and clock display on the desktop. NOTE: You can use the down arrow icon next to the clock to have it display the date in the current year or the month. Clock Mode You can configure the time display to show the date, or even the day of the week, month, or year. DAY This display shows the current day of the week, and whether it is Saturday, Sunday, or Monday. MONTH
